RIYA TIWARI

AI/ML Engineer • Agentic AI • RAG Systems • LLM Engineering
+91 7302512063 | riyatrpthi@gmail.com | linkedin.com/in/riaatiwarii | github.com/riaatiwarii

EDUCATION

B.Tech, EEE *2022 – 2026*
JSS Academy of Technical Education, Noida

EXPERIENCE

AI/ML Intern | SmartBridge (TheSmartBridge Educational Services) *Jan 2026 – Present*

- Worked with the product team building Skill Wallet — an AI-first EdTech platform with AI mentor bots, automated skill assessment, and personalized learning pathway recommendations powered by LLMs
- Contributed to ML pipeline development for SmartInternz, enabling intelligent project-based learning features across 2,700+ colleges and 1.5M+ students
- Built and integrated AI features including NLP-based skill gap analysis and automated competency tracking aligned with industry partner requirements from Salesforce, IBM, and ServiceNow

PROJECTS

Contract Review AI — Domain-Specific RAG System | *Python, LangChain, FAISS, OpenAI API, ChromaDB*

- Built a production-grade RAG pipeline (1.49 MB) for legal document intelligence — ingesting contracts, chunking with semantic overlap, embedding via OpenAI, and indexing in a FAISS vector store for sub-second retrieval
- Designed a domain-aware retrieval strategy with re-ranking and context window management, enabling precise clause extraction and risk identification across complex legal documents
- Integrated an LLM-powered response layer with source attribution, enabling non-technical users to query contract terms in natural language with cited evidence

AI Multi-Agent Startup Insight Engine | *Python, LangChain Agents, OpenAI API, Web Search, Multi-Agent Orchestration*

- Architected a multi-agent system with specialized agents for market research, competitor analysis, and financial insight — coordinated via an orchestrator agent using tool-use and chain-of-thought reasoning
- Implemented agent-to-agent communication with structured handoffs, shared memory context, and dynamic task delegation for autonomous business intelligence generation
- Designed prompt engineering and agent personas that reduced hallucinations and improved factual grounding across multi-hop reasoning tasks

Fine-Tuning Llama for Domain Adaptation | *Python, HuggingFace Transformers, LoRA/PEFT, PyTorch, Llama*

- Fine-tuned a Llama open-source LLM using LoRA (Low-Rank Adaptation) for parameter-efficient specialization on a custom domain-specific dataset, achieving significant performance gains on target tasks
- Managed the full fine-tuning pipeline: dataset preprocessing, tokenization, training loop with gradient checkpointing, evaluation metrics (ROUGE, perplexity), and model serialization for deployment
- Demonstrated deep understanding of LLM internals — attention heads, tokenizer alignment, and PEFT techniques — to adapt a 7B parameter model within constrained compute budgets

Monday.com Business Intelligence Agent | *Python, LangChain, Monday.com API, Tool-Use, Agentic AI*

- Built a real-world agentic AI system that interfaces with the Monday.com enterprise platform via tool-use — enabling autonomous data retrieval, board updates, and business report generation from natural language instructions
- Implemented robust API orchestration with structured output parsing, error recovery, and multi-step planning, making the agent reliable in a live enterprise environment

TECHNICAL SKILLS

LLM & GenAI	LangChain, OpenAI API, HuggingFace Transformers, Llama, LoRA/PEFT, Prompt Engineering
Agentic AI	Multi-Agent Orchestration, Tool-Use, ReAct Framework, Chain-of-Thought, Agent Memory
RAG Systems	FAISS, ChromaDB, Semantic Search, Document Chunking, Embedding Pipelines, Re-ranking
ML/DS	PyTorch, Scikit-learn, Pandas, NumPy, NLP, Text Summarization, Classification
Languages	Python, SQL, JavaScript (basics), Bash
Tools	Git, GitHub, n8n, REST APIs, Docker (basics), Jupyter, VS Code

CERTIFICATIONS

Machine Learning Specialization — Andrew Ng, DeepLearning.AI & Stanford University (Coursera)
